

IMAGEDRIVE™

DATA MANAGEMENT DOESN'T HAVE TO BE PAINFUL

ImageDrive™ is a web-enabled solution that integrates a patient's digital footprint across their circle of care. ImageDrive™ gives clinicians and researchers the data they need, when they need it, to make informed decisions.

ONE PLATFORM, TWO FLEXIBLE SOLUTIONS

ImageDrive™ addresses data management needs for both clinical workflows and clinical trials.

HOW DO HEALTHCARE PROVIDERS ACCESS DATA?

Most current solutions are either too generic or very specific, and lack interconnectivity.

— Some patient information is haphazardly stored, scattered across multiple locations and platforms without curation.

ImageDrive™ brings together a wide range of imaging and non-imaging data into one secure, indexed, yet easily accessible home for relevant patient information.

— Human or machine error often go unnoticed until time of access.

ImageDrive™ generates real-time quality control assessments to reduce re-scan rates and operational delays.

— Inefficient silos limit clinicians' and researchers' ability to draw data-driven conclusions across departments.

ImageDrive™ makes collaboration and peer review across multiple disciplines seamless.

INTERCONNECTIVITY DRIVES VALUE

imagedrive™ clinical FITS YOUR CLINICAL WORKFLOW

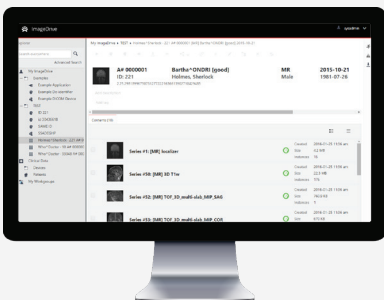

ImageDrive™ Clinical effortlessly aggregates and stores data, performs quality assessments and facilitates multidisciplinary collaboration. ImageDrive™ Clinical integrates with existing platforms and BrightMatter™ devices to make creating, sharing and storing patient data effortless and secure.

ADAPTABLE PRESENTATION TOOLS

- Generates patient timelines, storyboards and lists to tell chronological, patient-centric stories
- Facilitates easier interdisciplinary review through ability to add a wide range of imaging and non-imaging data from any point in a patient's history

QUALITY CONTROL MODULE

- Reviews quality of DICOM data at point of acquisition
- Allows for site-customizable quality control criteria
- Provides hospital administrators with quantitative data to track process performance

imagedrive™ pro ALSO ADAPTS TO YOUR RESEARCH WORKFLOW

ImageDrive™ Pro easily collects, de-identifies and shares data among research collaborators. ImageDrive™ Pro connects with external applications to easily aggregate data, automatically de-identify patient information and facilitate controlled, secure, peer review for clinical trials and clinical research. Workgroups allow for multiple, simultaneous studies with customized protocols.

DE-IDENTIFICATION

- Instantly de-identifies subject data for research or clinical trials
- Easily customizes automated de-identification protocols per workgroup
- Consistently de-identifies new studies from the same subject with historical entries

ADVANCED SEARCH AND SHARING TOOLS

- Offers customized tagging and classification systems help users find what they're looking for faster
- Controls access to data through workgroups and other features to protect data integrity
- Includes web sharing capabilities to facilitate peer review
